

Josh Crites

Grosse Pointe Woods, Michigan

jc@joshcrites.com · [Telegram](#) · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Engineering and developer-experience leader with eight years of experience making complex emerging technologies usable by developers. Experienced in building full-stack prototypes, developer tools, technical knowledge systems, reference applications, and AI-assisted workflows in ambiguous, rapidly evolving environments. Strongest at the boundary between engineering, product direction, and user understanding.

Core Skills

Agentic AI Systems

Claude Code, Cursor, MCP integrations, retrieval-augmented generation, context engineering, agent workflows, tool use, automation, knowledge systems

Developer Experience Engineering

Developer tooling, technical onboarding, documentation architecture, reference applications, API usability, developer feedback loops, support systems

Software Development

JavaScript, TypeScript, full-stack web development, APIs, GitHub workflows, smart contracts, Solidity, Noir, scripting and automation

Technical Leadership

Engineering and product collaboration, team leadership, technical strategy, executive communication, technical writing, workshops, curriculum development

Professional Experience

Head of Developer Relations — Aztec Labs

Remote | May 2022–July 2026

Led a six-person developer relations team for a privacy-focused smart-contract platform while building developer tooling, reference applications, AI-assisted knowledge systems, and technical workflows.

- Built full-stack applications, smart contracts, scripts, reference repositories, and developer tools to demonstrate new platform capabilities and validate implementation patterns.
- Designed AI-assisted workflows connecting models with documentation, source repositories, community knowledge, analytics, and live network data.
- Evaluated and implemented retrieval, MCP, context-management, and agent architectures for technical support and software-development use cases.
- Developed knowledge pipelines covering more than 2,000 chunks of versioned developer documentation and API reference material.
- Used Claude Code and related tools to automate documentation generation, repository analysis, testing, bug reproduction, and recurring engineering workflows.
- Combined internal engineering feedback and external developer behavior to influence APIs, tooling, documentation, and product priorities.

Developer Relations Engineer — cLabs / Celo Foundation

Remote | February 2020–May 2022

Designed developer experiences and educational systems for a mobile-first financial platform built on Ethereum technology.

- Created and executed a developer-relations strategy spanning onboarding, technical content, workshops, community programs, and product feedback.
- Designed learning journeys that enabled developers to move from initial discovery to building and deploying working applications.
- Built technical demonstrations and example applications that made unfamiliar platform capabilities concrete and understandable.

Ethereum Educator — ConsenSys Academy

Remote | January 2018–February 2020

- Designed and operated an Ethereum developer bootcamp serving thousands of software developers.

Selected Independent Work

Agentic Computing and Human–AI Interfaces

- Designed workflows for managing multiple persistent AI coding agents across local computers, Raspberry Pi systems, messaging interfaces, and home-automation environments.
- Prototyped an AI-assisted piano-learning environment connecting software, MIDI input, local hardware, and personalized instruction.

- Developed concepts for agent-accessible technical knowledge systems that provide structured context rather than relying on conventional documentation search.

Workshops and Technical Experiences

Designed and delivered technical workshops and interactive learning experiences covering:

- AI-assisted software development and agent harnesses
- Privacy-preserving application development
- Smart contracts and zero-knowledge programming
- Security-focused developer challenges
- Full-stack decentralized applications

Education

University of Michigan — Ann Arbor, Michigan — 2011

B.S., Ecology and Evolutionary Biology

B.S., Environmental Chemistry
